

Just because you see well does NOT mean your eyes are healthy.

By the time you have symptoms affecting your vision it is usually too late to prevent permanent sight damage.

We are now using the most advanced retinal imager: the Optomap.

This instrument will enhance our ability to detect and monitor various eye health issues that may lead to blindness: DIABETES, HIGH BLOOD PRESSURE, GLAUCOMA, CATARACTS, and many other diseases.

We care about your vision and want to be sure we are actively monitoring your eye and its health; the Optomap retinal image is the best way to consistently do this.

Your insurance may or may not cover this with a co-pay.

Please check one of the following:

- Yes, I would like this imaging procedure

- I would like to discuss this with the doctor
